

American Heart Association®

ASLS® Blended Learning Course

Hands-on skills session

Date: 5 November 2025 (Wed)

Time: 14:00-18:30

Venue: Rooms 901-903, 9/F,
LI Shu Pui Block Phase II,
Hong Kong Sanatorium & Hospital

CME & CNE accreditation available

The Hong Kong Neurosurgical Society

Proud to be an AHA Training Center

Advanced Stroke Life Support® Blended Learning

The American Heart Association, in partnership with The University of Miami's Gordon Center, is excited to announce a new stroke education course for in-hospital and prehospital healthcare professionals.

The new Advanced Stroke Life Support (ASLS®) Blended Learning Course will educate healthcare professionals to identify, evaluate, and manage patients with stroke.

The International English (IVE) training materials have been adapted to include global stroke epidemiology, differences in the availability of treatment options, stroke systems of care and international stroke care quality improvement programs.

COURSE OPTIONS

The new ASLS Course offers 3 provider course tracks.

Pre-Hospital Provider Course

- Highlights the principles of pre-hospital stroke management that makes up the current standard of care, such as determining when to call a stroke alert and quickly transport the patient to the nearest appropriate facility.
- Explains how to communicate the patient's symptoms, time of onset, and neurologic exam clearly and succinctly with hospital personnel.

In-Hospital Provider Course

- Focuses on the importance of an organized approach to treating stroke patients for improved outcomes.
- Discusses the etiologic evaluation and secondary stroke prevention for stroke patients.
- Describes the management of goals for acute ischemic stroke, intracerebral hemorrhage, and subarachnoid hemorrhage.
- Outlines post-acute care management including supportive medical care, rehabilitation and discharge planning for stroke patients.

Pre-Hospital & In-Hospital Provider Course

- Combines all of the components of the Pre-Hospital and In-Hospital courses, and is best suited for healthcare providers who work in both environments, as well as ASLS instructor candidates that will be conducting the in-person skills testing for learners from both audiences.

BLENDED LEARNING FORMAT

Blended learning uses online technology not only to supplement but also to transform and improve the learning process. It is a combination of eLearning, in which a student completes part of the course in a self-directed manner, followed by an in-person skills test with an ASLS instructor.

WHO SHOULD TAKE THE COURSE?

Healthcare providers caring for acute stroke patients, including professionals in emergency response, emergency medicine, neurology, intensive care, stroke care and critical care units.
